

MODEL TRAIN CONTROL SYSTEM

ABSTRACT OF THE DISCLOSURE

5 A system which operates a digitally controlled
model railroad transmitting a first command from a first
client program to a resident external controlling
interface through a first communications transport. A
second command is transmitted from a second client
10 program to the resident external controlling interface
through a second communications transport. The first
command and the second command are received by the
resident external controlling interface which queues the
first and second commands. The resident external
15 controlling interface sends third and fourth commands
representative of the first and second commands,
respectively, to a digital command station for execution
on the digitally controlled model railroad.
